5. Conclusion

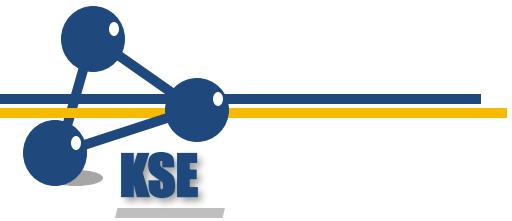

Part 1

Background and Research Objectives

Background and research objective

Large language models like GPT family contain vast amounts of knowledge and support answering questions posed by users using their own included knowledge.

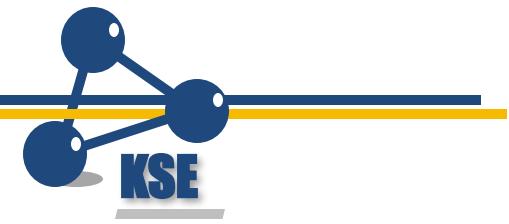

Question: Can large language models replace the traditional KBQA model ?

Research objective: To evaluate the effectiveness of large language models, represented by the GPT family, when used as self-referential knowledge graphs in answering complex open-domain questions.

Part 2

Previous works and findings

Previous findings:

- ChatGPT tends to be a lazy reasoner and performs poorly in inductive reasoning tasks. ([Bang et. al, A multitask, multilingual, multimodal evaluation of chatgpt on reasoning, hallucination, and interactivity, 2023](#))
- ChatGPT exhibits lower consistency in its question-answering results compared to traditional KBQA models. ([Omar et. al, Chatgpt versus traditional question answering for knowledge graphs: Current status and future directions towards knowledge graph chatbots, 2023](#))

CheckList^[4] Black-box testing

1. Minimum Functionality Test
 - Testing the model's various fundamental

2. INVariance Test
 - Making multiple input modifications while keeping the main features unchanged, observe if the model can maintain output consistency.

3. DIRectional Expectation Test
 - Introducing expected input modifications to observe whether the model produces the anticipated results.

| Capability | Min Func Test | INVariance | DIRectional |
|------------|------------------|------------|-------------|
| Vocabulary | Fail. rate=15.0% | 16.2% | C 34.6% |
| NER | 0.0% | B 20.8% | N/A |
| Negation | A 76.4% | N/A | N/A |
| ... | | | |

| Test case | Expected | Predicted | Pass? |
|--|----------|----------------|-------|
| A Testing Negation with MFT Labels: negative, positive, neutral | | | |
| Template: I {NEGATION} {POS_VERB} the {THING}. | | | |
| I can't say I recommend the food. | neg | pos | X |
| I didn't love the flight. | neg | neutral | X |
| ... | | | |
| Failure rate = 76.4% | | | |
| B Testing NER with INV Same pred. (inv) after removals / additions | | | |
| @AmericanAir thank you we got on a different flight to [Chicago → Dallas]. | inv | pos neutral | X |
| @VirginAmerica I can't lose my luggage, moving to [Brazil → Turkey] soon, ugh. | inv | neutral neg | X |
| ... | | | |
| Failure rate = 20.8% | | | |
| C Testing Vocabulary with DIR Sentiment monotonic decreasing (↓) | | | |
| @AmericanAir service wasn't great. You are lame. | ↓ | neg neutral | X |
| @JetBlue why won't YOU help them?! Ugh. I dread you. | ↓ | neg neutral | X |
| ... | | | |
| Failure rate = 34.6% | | | |

(Ribeiro et. al, Beyond Accuracy: Behavioral Testing of NLP models with CheckList, 2020)

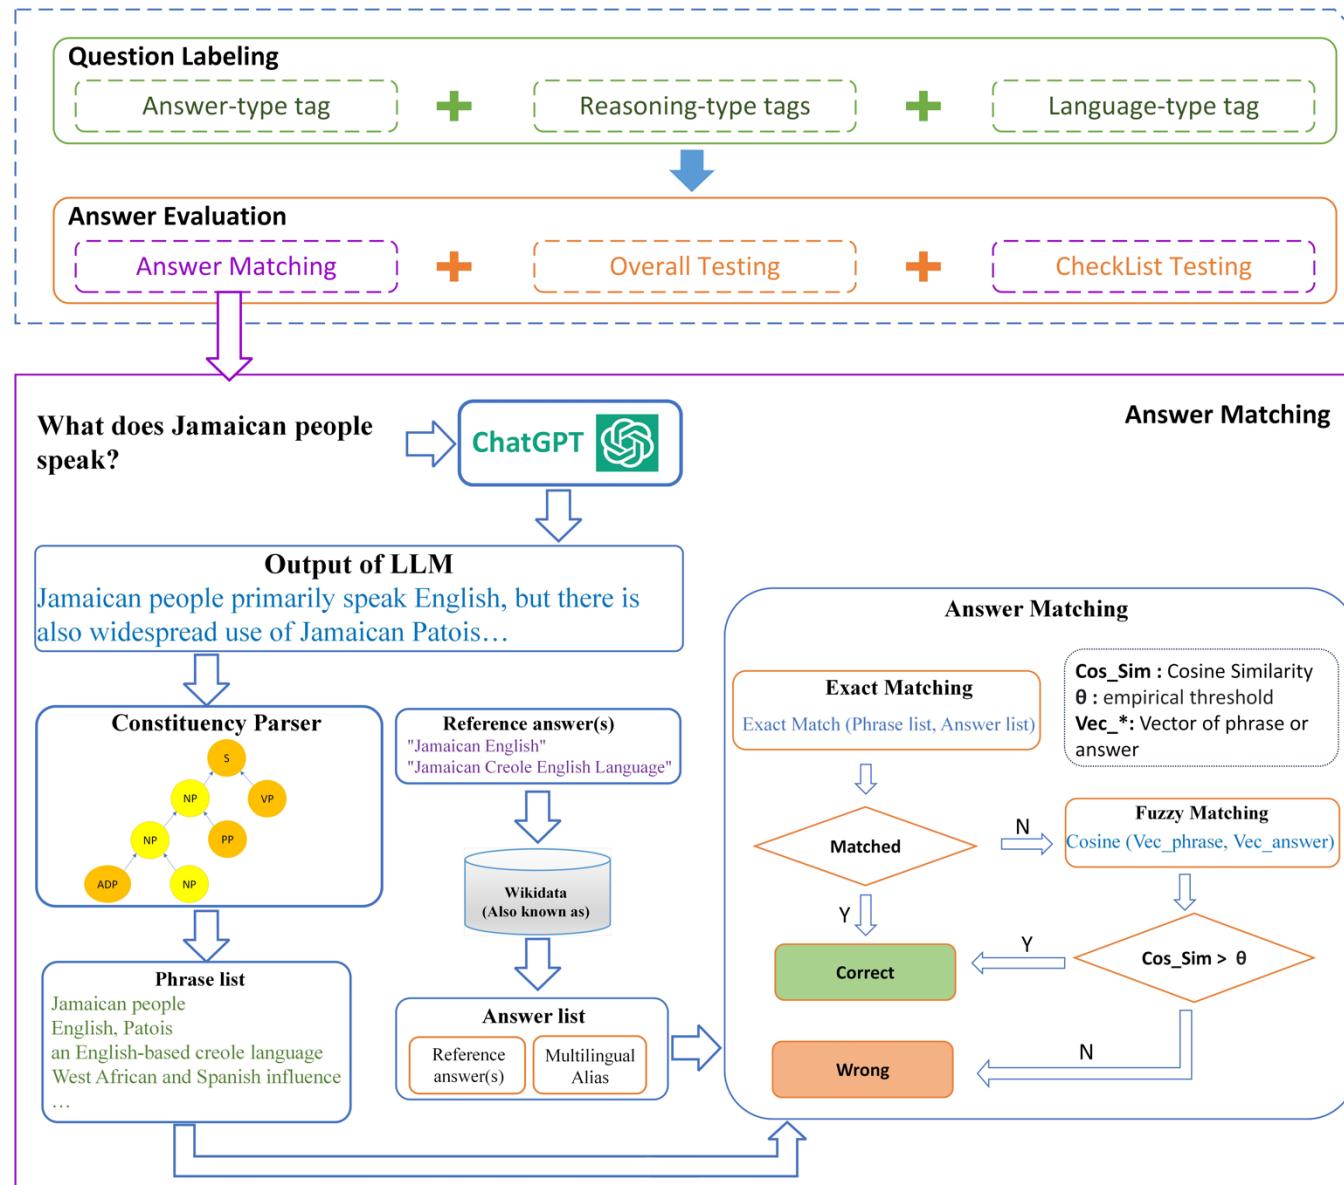

Part 3

The Q&A evaluation framework

The Q&A evaluation framework

Question Labeling:

The three labels "Answer-Type," "Reasoning-Type," and "Language-Type" are set to uniformly describe the characteristics of questions originating from different KBQA data sets.

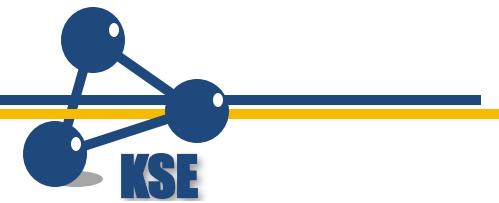

Answer Evaluation:

Answer Matching:

Exact matching (EM) + Fuzzy matching

Overall Testing: Assessment of QA Performance for GPT LLM.

CheckList Testing: Testing the Consistency and Robustness of GPT LLM as a Question-Answering System

1. Source of feature labels:

Answer Type: From answer types in existing KBQA datasets.

Reasoning Type: From inference type labels in existing KBQA datasets and keywords involved in SPARQL queries.

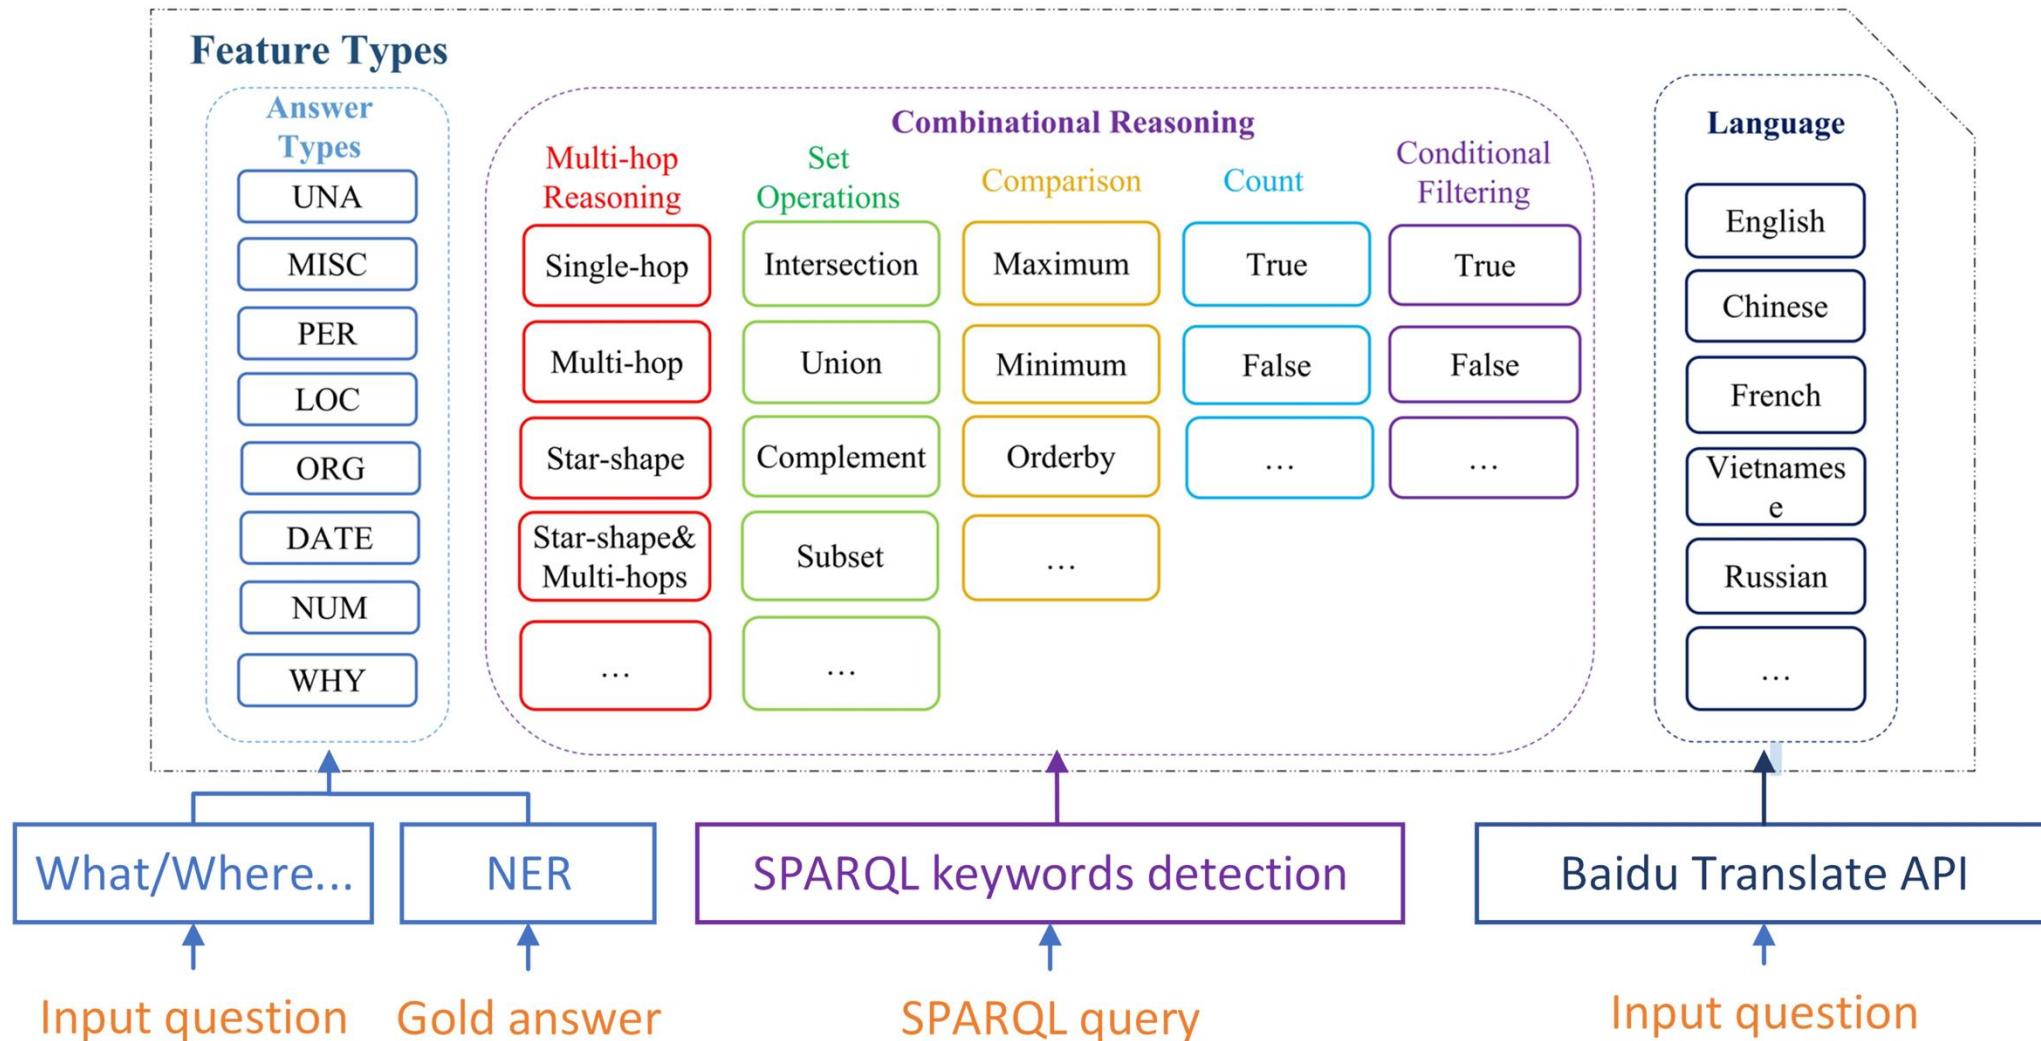

Language Type : From language labels in existing multilingual KBQA datasets.

Table 1. The feature-driven question tags defined in this paper.

| Answer type | Description |
|----------------|--|
| MISC | The answer to the question is the miscellaneous fact defined by the named entity recognition task. |
| PER | The answer to the question is the name of a person. |
| LOC | The answer to the question is a location. |
| WHY | The answer explains the reasons for the facts mentioned in the question. |
| DATE | The answer to the question is a date or time. |
| NUM | The answer to the question is a number. |
| Boolean | The answer to the question is yes or no. |
| ORG | The answer to the question is the name of a organization. |
| UNA | The input question is unable to answer. |
| Reasoning type | Description |
| SetOperation | The process of obtaining answers involves set operations. |
| Filter | The answer is obtained through condition filtering. |
| Counting | The process of obtaining an answer involves counting operations. |
| Comparative | The answer needs to be obtained by comparing or sorting numerical values. |
| Single-hop | Answering questions requires a single-hop Reasoning. |
| Multi-hop | Answering questions requires multi-hop Reasoning. |
| Star-shape | The reasoning graph corresponding to inputting question is star-shape. |

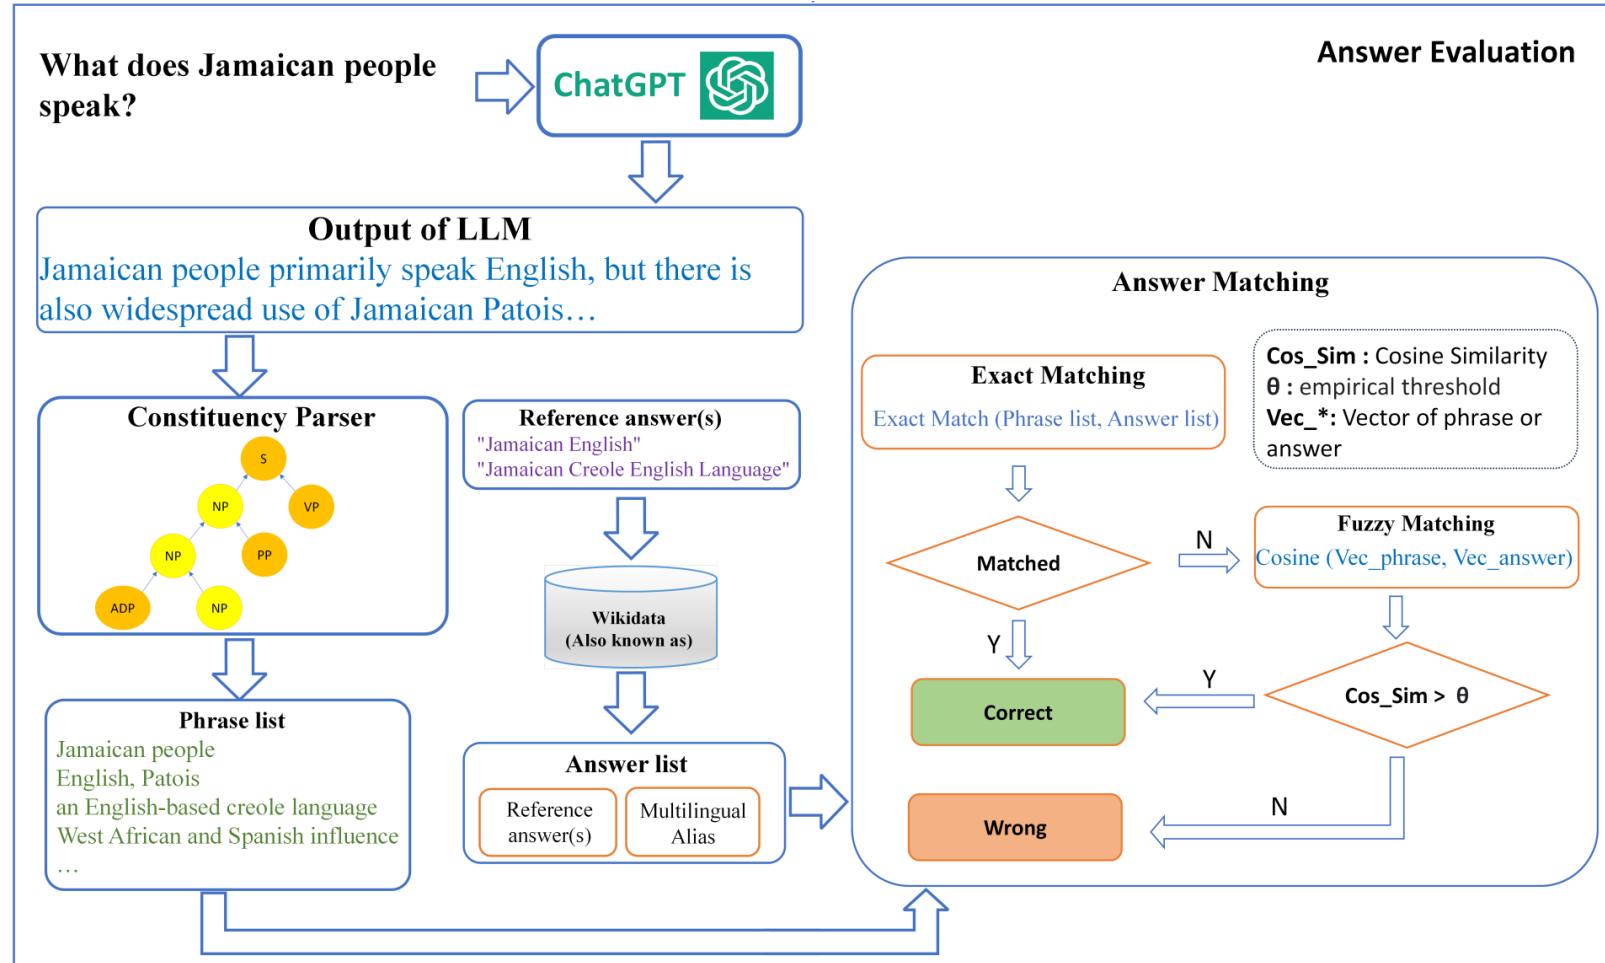

Question Labeling – Auto labeling

Answer Evaluation – Answer Matching

Expanded Exact Matching:

We obtained multilingual aliases for all reference answers from Wikipedia, greatly expanding the matching scope of the Gold list.

Fuzzy Matching:

Fuzzy matching is performed based on cosine similarity thresholds using m-BERT word vectors.

Condition for fuzzy matching :

when EM fails and the answer type is not a number, date, symbol code, or other sequences that are difficult to distinguish based on vector similarity.

Answer Evaluation – CheckList testing

Original Test case:

What unit does the international system of units use to measure magnetic flux density?

INV cases

Case 1: Provide some orthographic variations (potentially erroneous)

What unit does the international system of units use to measure **magneti** flux density?

Case 2: Paraphrase

What unit does the international system of units use to measure magnetic flux density?

Which unit is utilized by the International System of Units for measuring magnetic flux density?

INV Metric

Record positive instances when the model produces the same judge result for the output of the three inputs.

DIR cases

Case 1: Altering the execution details of reasoning

What unit does the international system of units do **not** use to measure magnetic flux density? Generate the corresponding SPARQL query.

Case 2: Add prompt with answer type info

What unit does the international system of units use to measure magnetic flux density?, **the type of answer is 'miscellaneous'.**

Case 3: CoT (step-by-step):

Input1: What does 'unit' mean?

Input2: What does 'international system' mean?

Input3: What does 'measure magnetic' mean?

Input4: ...

Input5: What unit does the international system of units use to measure magnetic flux density?

DIR Metric

When the model output matches the expected output of the cases, it is recorded as a positive instance.

Case 1 expect [correct revise in SPARQL]:
SPARQL with a new filter process.

Case 2 expect [matched answer type]:
The type of answer generated by the model matches/corresponds to the answer type provided in the prompt.

Case 3 expect [improved accuracy of answers]:
Generating answers with higher accuracy.

Part 4

Experiments and key findings

Results and key findings – Datasets for testing

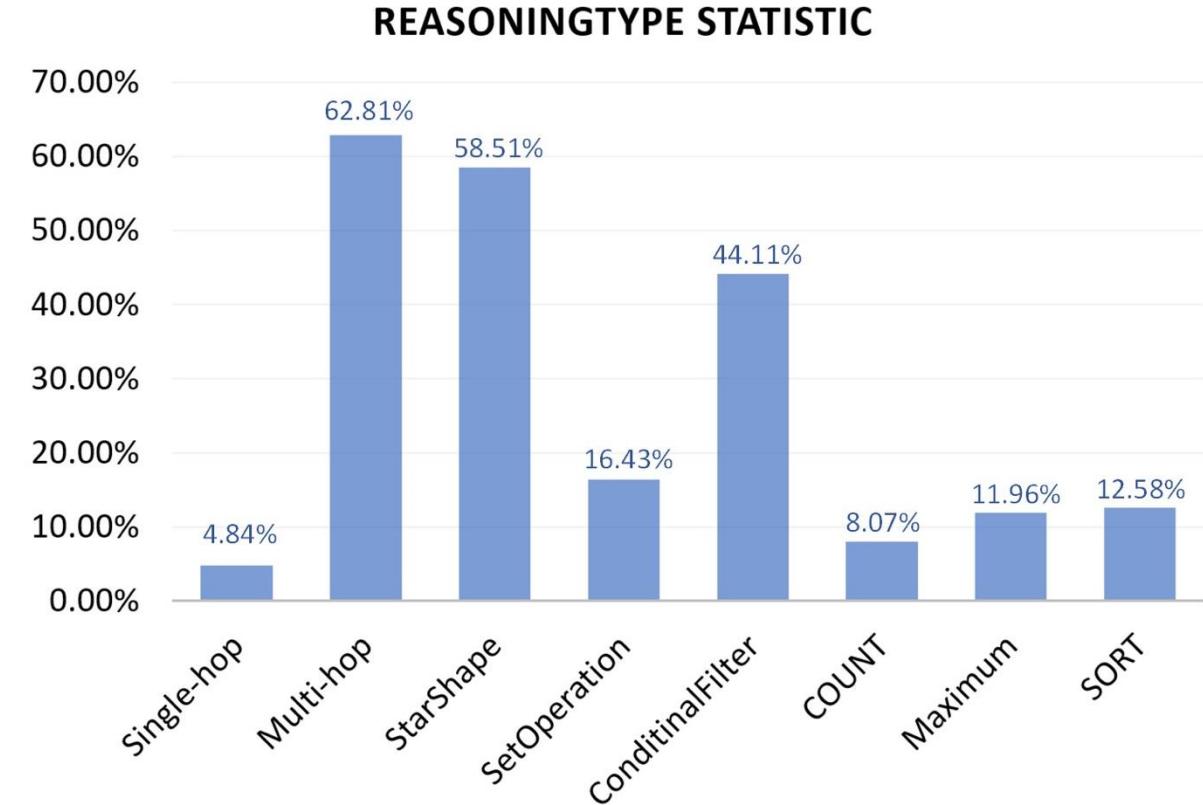

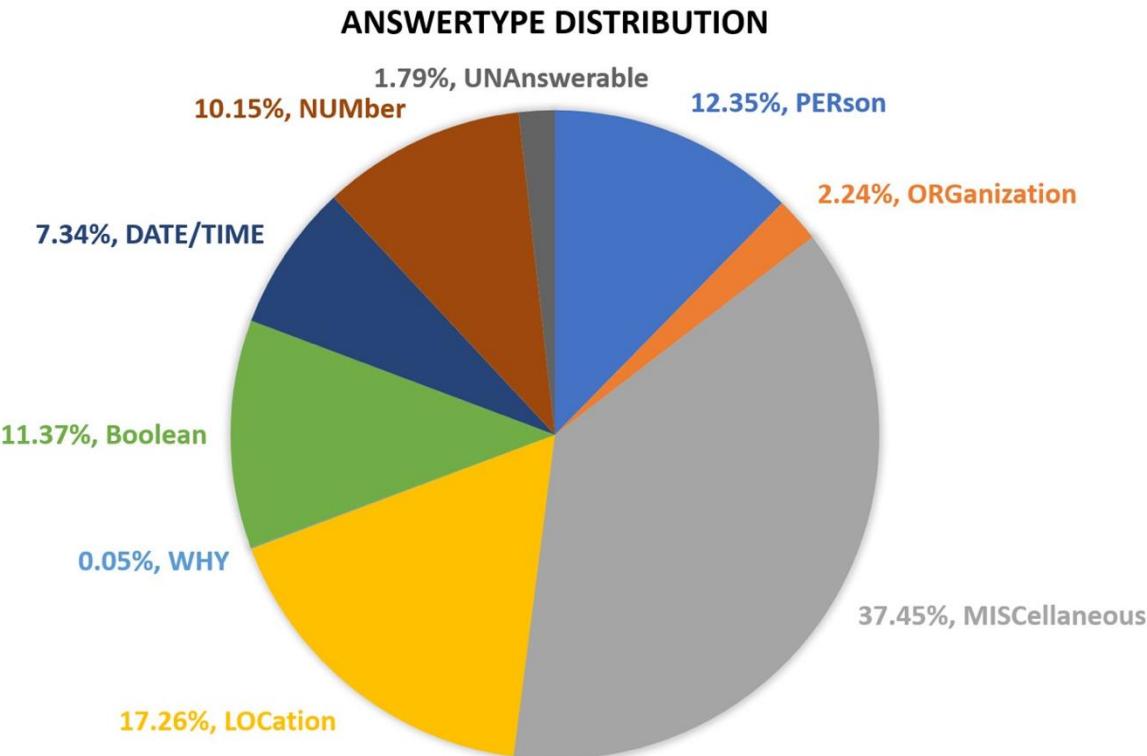

Table 2. The Statistical of collected KB-based CQA datasets, "Col. Size" represents the size of the dataset we collected in our experiments. "Size" denotes the original size of the dataset.

| | Datasets | Size | Col. Size | Lang |
|----------------------------|------------|---------|-----------|------|
| (Cao, S. et. al, 2022) | KQapro | 117,970 | 106,173 | EN |
| (Dubey, M. et. al, 2019) | LC-quad2.0 | 26,975 | 26,975 | EN |

Results and key findings - Datasets for testing

Results and key findings – LLM for testing

GPT family:

GPT-3 (text-davinci-001)

GPT-3.5 v2 (text-davinci-002)

GPT-3.5 v3 (text-davinci-003)

ChatGPT (gpt3.5-turbo-0301)

GPT-4

LLM not belongs to GPT family :

FLAN-T5 (Text-to-Text Transfer Transformer 11B)

Main results – Overall Testing

Table 3. Overall results of the evaluation. We compare the exact match of ChatGPT with current SOTA traditional KBQA models (fine-tuned (FT) and zero-shot (ZS)), GPT family LLMs, and Non-GPT LLM. In GraphQ, QALD-9 and LC-quad2, the evaluation metric used is F1, while other datasets use Accuracy (Exact match).

| Datasets | KQapro | LC-quad2 | WQSP | CWQ | GrailQA | GraphQ | QALD-9 | MKQA |
|-----------|-------------------|--------------|--------------|-------------------|----------------|--------------|-------------------|--------------|
| | Acc | F1 | Acc | Acc | Acc | F1 | F1 | Acc |
| SOTA(FT) | 93.85 [29] | 33.10 [31] | 73.10 [15] | 72.20 [15] | 76.31 ‡ | 31.8 [13] | 67.82 [32] | 46.00 [22] |
| SOTA(ZS) | 94.20 [25] | - | 62.98 [50] | - | - | - | - | - |
| FLAN-T5 | 37.27 | 30.14 | 59.87 | 46.69 | 29.02 | 32.27 | 30.17 | 20.17 |
| GPT-3 | 38.28 | 33.04 | 67.68 | 51.77 | 27.58 | 38.32 | 38.54 | 26.97 |
| GPT-3.5v2 | 38.01 | 33.77 | 72.34 | 53.96 | 30.50 | 40.85 | 44.96 | 30.14 |
| GPT-3.5v3 | 40.35 | 39.04 | 79.60 | 57.54 | 35.43 | 47.95 | 46.19 | 39.05 |
| ChatGPT | 47.93 | 42.76 | 83.70 | 64.02 | 46.77 | 53.10 | 45.71 | 44.30 |

| fa | 2.45 | 6.59 | 21.09 | 11.49 | 22.03 | 31.71 |
| zh_cn | 3.65 | 17.45 | 22.40 | 24.87 | 33.46 | 44.62 |

1. With each new iteration, the GPT family's multilingual question-answering capabilities are on the rise.
2. The improvement of GPT-4 indicates that the introduction of multimodal information significantly enhances performance for certain language types

(a)

From a dataset perspective, the GPT models and FLAN-T5 share a high degree of similarity in their trendlines.

(b)

From a multilingual question-answering perspective, before the introduction of multimodal information (GPT-4), the GPT family also maintained a roughly similar trendline shape.

Main results – Overall Testing

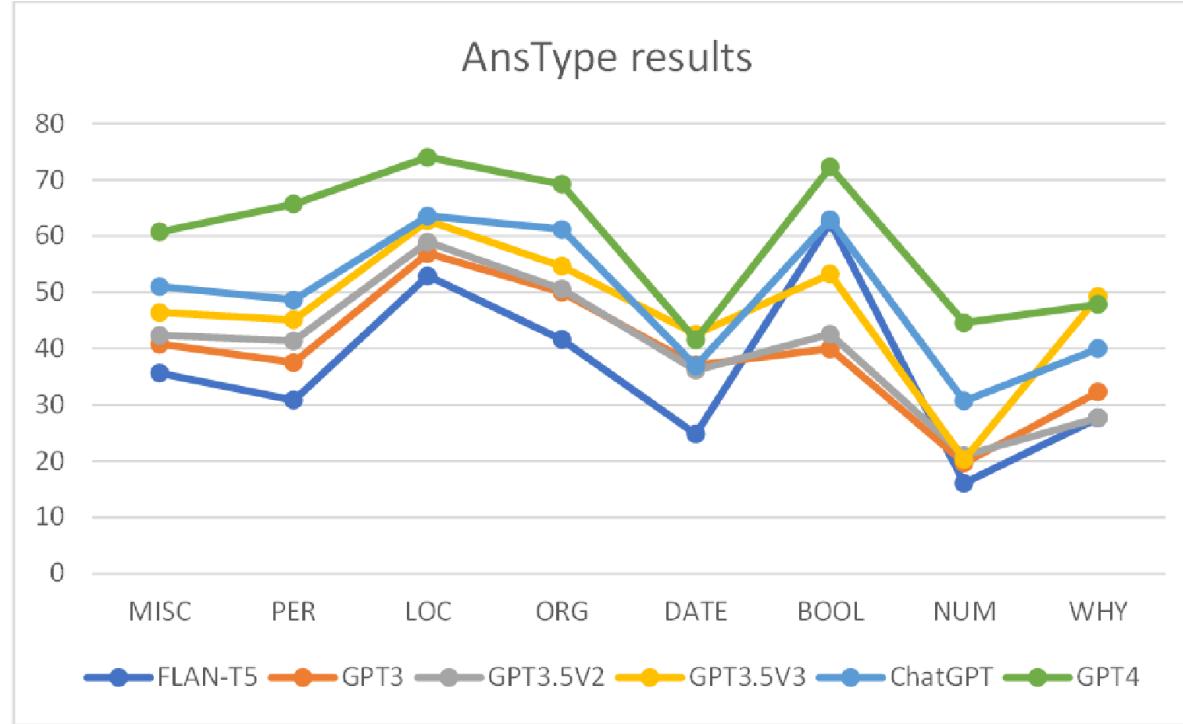

Table 5. Exact Match comparison based on Answer Types (AnsType) and Reasoning Types (RsgType)

| MF | FLAN-T5 | GPT-3 | GPT-3.5v2 | GPT-3.5v3 | ChatGPT | GPT-4 |
|--------------|---------|-------|-----------|--------------|---------|--------------|
| AnsType | | | | | | |
| MISC | 35.67 | 40.79 | 42.35 | 46.42 | 51.02 | 60.73 |
| PER | 30.84 | 37.53 | 41.36 | 45.10 | 48.65 | 65.71 |
| LOC | 52.91 | 56.92 | 58.93 | 62.71 | 63.55 | 73.98 |
| ORG | 41.62 | 50.01 | 50.58 | 54.62 | 61.18 | 69.20 |
| DATE | 24.81 | 37.07 | 36.15 | 42.54 | 36.92 | 41.57 |
| Boolean | 62.43 | 39.96 | 42.56 | 53.23 | 62.92 | 72.28 |
| NUM | 16.08 | 19.66 | 21.01 | 20.31 | 30.70 | 44.59 |
| WHY | 27.69 | 32.31 | 27.69 | 49.23 | 40.00 | 47.83 |
| UNA | - | - | - | - | - | - |
| RsgType | | | | | | |
| SetOperation | 60.11 | 60.12 | 62.03 | 66.86 | 70.00 | 79.70 |
| Filtering | 45.01 | 49.06 | 51.24 | 55.43 | 63.40 | 68.40 |
| Counting | 10.68 | 17.56 | 20.83 | 20.83 | 28.41 | 42.50 |
| Comparison | 72.13 | 72.44 | 74.00 | 80.00 | 74.74 | 82.79 |
| Single-hop | 41.00 | 38.72 | 42.54 | 49.22 | 54.00 | 74.14 |
| Multi-hop | 35.68 | 41.09 | 42.98 | 47.06 | 44.88 | 57.20 |
| Star-shape | 37.23 | 42.28 | 43.96 | 48.17 | 47.43 | 60.91 |

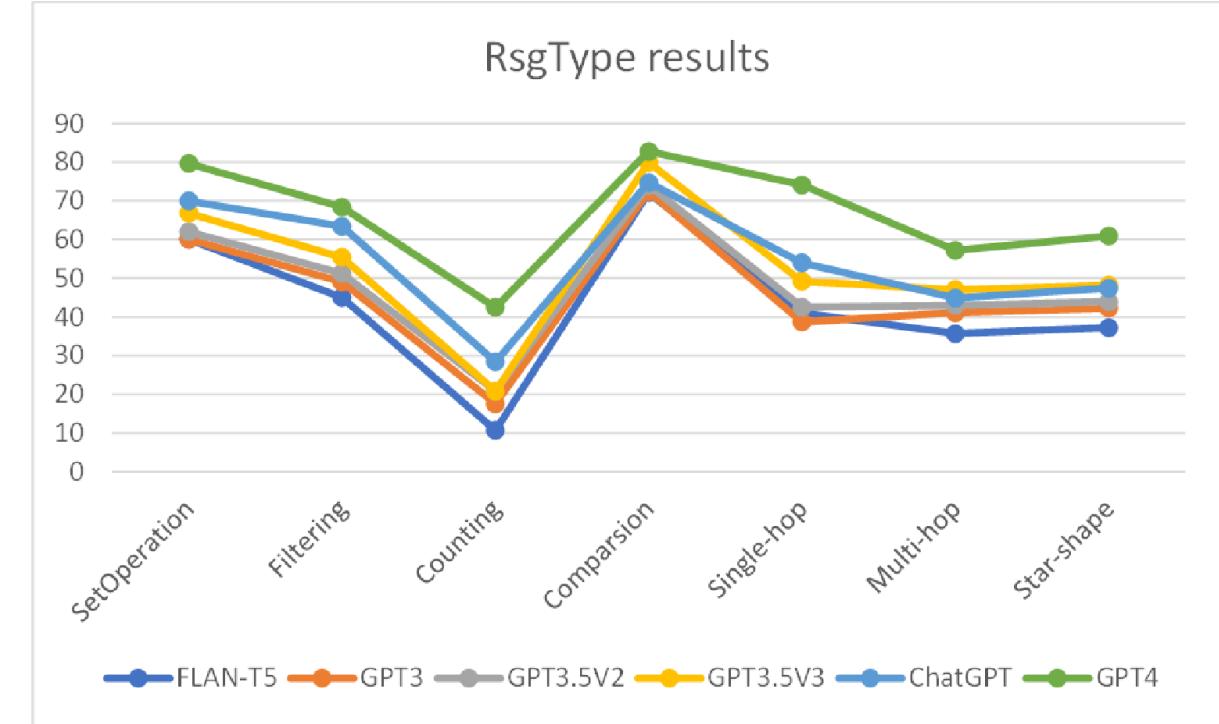

Main results – Overall Testing

(c)

In terms of the types of answers to questions, there's a striking similarity in the strengths and weaknesses of past GPT models and FLAN-T5.

(d)

In terms of the types of reasoning involved in the questions, FLAN-T5 and the GPT family tend to excel or struggle with the same kinds of reasoning operations.

CheckList results

Table 6. MFT results of ChatGPT

| | SetOperation | Filtering | Counting | Comparison | Single-hop | Multi-hop | Star-shape |
|--------------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|
| Single Reasoning | 60.22 | 51.39 | 24.16 | 31.48 | 44.07 | 48.27 | 50.75 |
| Multiple Reasoning | 70.00 | 63.40 | 28.41 | 74.74 | 54.00 | 44.88 | 47.43 |

Table 7. INV results of GPT family

| LLM | CCC | CCW | CWC | CWW | WCC | WCW | WWC | WWW | Stability Rate |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|----------------|
| GPT-3 | 434 | 64 | 59 | 52 | 42 | 43 | 73 | 666 | 76.76 |
| GPT-3.5 v2 | 495 | 44 | 65 | 42 | 43 | 30 | 58 | 656 | 80.30 |
| GPT-3.5 v3 | 604 | 46 | 43 | 49 | 34 | 35 | 49 | 583 | 82.83 |
| ChatGPT | 588 | 49 | 72 | 68 | 52 | 27 | 32 | 545 | 79.06 |
| GPT-4 | 798 | 0 | 0 | 65 | 54 | 0 | 0 | 516 | 91.70 |

Table 8. DIR results for RsgType, the score represents the percentage of expected output produced by the LLMs.

| | SetOperation | Filtering | Counting | Comparison | Overall |
|------------|--------------|------------|------------|------------|---------------|
| GPT-3.5 v3 | 45% | 75% | 65% | 65% | 62.5% |
| ChatGPT | 75% | 85% | 70% | 65% | 73.75% |
| GPT-4 | 65% | 90% | 70% | 60% | 71.25% |

MFT result

Multiple types of reasoning better than single type of reasoning

INV result

The consistency of the GPT model has steadily improved with each iteration, approaching the trend of traditional models.

DIR case 1

ChatGPT produce responses that aligned more closely with expectations for the DIR test case 1

CheckList results

Table 9. DIR results for AnsType prompting

| | MISC | PER | LOC | ORG | DATE | Boolean | NUM | WHY |
|------------|--------|--------|--------|--------|-------|---------|--------|--------|

| GPT-4 | +2.05 | +0.93 | +11.11 | -1.88 | +2.82 | +2.68 | | |

DIR case 2

Answer type prompting produces better results for weaker models.

DIR case 3

Multi-step prompting can significantly enhance LLM's ability to tackle specific types of questions.

Part 5

Conclusion

Conclusion

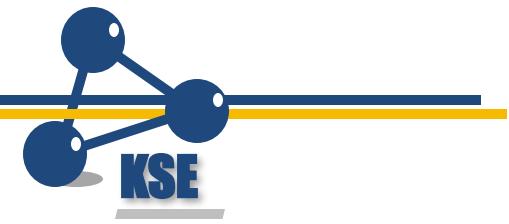

Q1: Can LLM replace traditional KB or become a new form of KB?

A1: The precondition is that we need to find LLM-specific SPARQL so that it can access the knowledge it contains correctly and reliably.

Q2: Can GPT models based on their own knowledge potentially replace traditional KBQA models?

A2: Not yet, although on some test sets, GPT-4's QA performance has exceeded traditional models. However, its lower consistency makes it not a reliable QA model.

Thank you !
